

1837

1836-1838

Anterior sacral meningocele was first described in **1837** as a part of **neural tube defect** (NTD) spectrum.

The first case of **Foix-Chavany-Marie Syndrome** was reported in **1837** by Magnus. The syndrome was described by Foix Chavany et Marie in **1926** ¹⁾, and called SFMC by Weller (1993). His literature review of 62 SFMC allowed the differentiation of five clinical types: the classical and most common form associated with cerebrovascular disease, a subacute form caused by central nervous system infections, a developmental form, a reversible form in children with epilepsy and a rare type associated with neurodegenerative disorders ²⁾.
