

1924

[1923-1925](#)

[Esthesioneuroblastoma](#) (ENB), originally described in 1924¹⁾.

[Alpha waves](#) or [Alpha rhythm](#) are macroscopic neural oscillations in the frequency range of 8-12 Hz likely originating from the synchronous and coherent (in-phase or constructive) electrical activity of the thalamic pacemaker cells in humans. Historically, they are also called “Berger's waves” after Hans Berger, who first described them when he invented the [EEG](#) in 1924.
