

Constructive interference in [steady-state](#)

FIESTA-C is a modification of the basic [FIESTA](#)/TrueFISP sequence. The equivalent Siemens product is called CISS (Constructive Interference Steady State). FIESTA-C/CISS is composed of a pair of TrueFISP acquisitions run back-to-back preceded by an automatic shimming procedure. The first uses phase alternation of the RF-pulses ($+\alpha$, $-\alpha$, $+\alpha$, $-\alpha$, ...) while the second does not ($+\alpha$, $+\alpha$, $+\alpha$, etc).

see [3D FIESTA magnetic resonance imaging](#)
