

Amyloid plaques by 17-18 months in the neocortex and hippocampus with detection of five to ten-fold more A $\beta$ 40 than A $\beta$ 42. Plaque burden significantly lower than in the double transgenic PS2APP. Lower levels of insoluble A $\beta$ 40 and A $\beta$ 42 than the PS2APP mouse at 16-18 months (Richards et al., 2003).
