

# Authorship

Academic authorship of [journal articles](#), [books](#), and other original works is a means by which academics communicate the results of their scholarly work, establish priority for their discoveries, and build their [reputation](#) among their peers.

## Implications

Authorship confers [credit](#) and has important academic, social, and financial [implications](#). Authorship also implies [responsibility](#) and [accountability](#) for published work. The following recommendations are intended to ensure that [contributors](#) who have made substantive intellectual contributions to a paper are given credit as authors, but also that [contributors](#) credited as authors understand their role in taking responsibility and being accountable for what is published.

Because authorship does not communicate what [contributions](#) qualified an individual to be an [author](#), some journals now request and publish information about the [contributions](#) of each person named as having participated in a submitted [study](#), at least for [original research](#). [Editors](#) are strongly encouraged to develop and implement a [contributorship](#) policy, as well as a policy that identifies who is responsible for the integrity of the work as a whole. Such policies remove much of the ambiguity surrounding contributions but leave unresolved the question of the quantity and quality of contribution that qualify an individual for authorship. The [ICMJE](#) has thus developed criteria for authorship that can be used by all journals, including those that distinguish authors from other contributors.
