

Bone-marrow mesenchymal stem cell

Bone marrow [mesenchymal stem cells](#) (BMSCs), the important component and regulator of bone marrow microenvironment, give rise to hematopoietic-supporting stromal cells and form hematopoietic niches for hematopoietic stem cells (HSCs). ... Keeping the differentiation balance of BMSCs is critical for hematopoietic recovery.

[Bone marrow stromal cells](#) (BMSCs) usually refers to a group of multipotential, heterogeneous members within the [bone marrow](#) that act as stem/progenitor cells of the bone tissue and are indirectly responsible for [hematopoiesis](#).

Bone-marrow mesenchymal stem cells for spinal cord injury treatment
