

# Brevibacterium casei

*Brevibacterium casei* (*B. casei*) is an aerobic, [gram positive bacillus](#) to which the aroma and colour of cheese is attributed, and until not long ago it was postulated to be a cutaneous saprophyte <sup>1)</sup> with no pathogenic ability. There are few cases of infections caused by this genus and they are mainly reported as a pathogen in immunocompromised patients <sup>2)</sup>. catheter-related infections <sup>3) 4)</sup>.

---

*Brevibacterium casei* is the most commonly reported species of *Brevibacterium* isolated from clinical specimens <sup>5)</sup>.

## Case reports

Dotchi et al. reported one case of [vertebral osteomyelitis](#) <sup>6)</sup>.
