

Burke-Fahn-Marsden Dystonia Rating Scale

The Burke-Fahn-Marsden [Dystonia Rating Scale](https://neurosurgerywiki.com/wiki/doku.php?id=burke-fahn-marsden_dystonia_rating_scale) is a universally applied instrument for the quantitative assessment of dystonia in both children and adults. However, immature movements by healthy young children may also show “dystonic characteristics” as a consequence of physiologically incomplete brain maturation.
