

Causalgia

The term [causalgia](#) (Greek: *kausis* – [burning](#), *algos* – [pain](#)) was introduced by [Silas Weir Mitchell](#) in [1864](#). It was used to describe a rare [syndrome](#) that followed a minority of partial [peripheral nerve injury](#) in the American civil war. Triad: [burning pain](#), [autonomic dysfunction](#) and trophic changes.

For [causalgia](#), see [Complex regional pain syndrome \(CRPS\)](#):

CRPS Type II (AKA major causalgia) follows [nerve injury](#) (originally described after high velocity missile injuries). CRPS Type I (AKA [reflex sympathetic dystrophy](#) or causalgia minor) denoted less severe forms, and has been described after non-penetrating trauma ¹⁾.

Shoulder-hand syndrome and Sudeck's atrophy are other variant designations. In [1916](#), the [autonomic nervous system](#) was implicated by René Leriche, and the term [reflex sympathetic dystrophy](#) (RSD) later came into use ²⁾ (but RSD may be distinct from causalgia) ³⁾.
