

C-C motif chemokine 11 also known as eosinophil chemotactic protein and [eotaxin-1](#) is a protein that in humans is encoded by the CCL11 gene. This gene is encoded on three exons and is located on [chromosome 17](#).

CCL11 is a small cytokine belonging to the CC chemokine family. CCL11 selectively recruits eosinophils by inducing their chemotaxis, and therefore, is implicated in allergic responses.
