

Cerebellar Arteriovenous Malformation Epidemiology

Cerebellar arteriovenous malformations (AVMs) comprise 10%-15% of all intracranial arteriovenous malformations¹⁾, and this relatively low incidence has led authors to combine them with brainstem arteriovenous malformation in reports on infratentorial or posterior fossa arteriovenous malformations^{2) 3) 4) 5) 6) 7) 8) 9) 10) 11)} and the majority (70%) of infratentorial arteriovenous malformations
