

The severity and the duration of tissue hypoperfusion determine the fate of the ischemic tissue.

Neurogenesis in the [cerebral infarction](#) after an ischemic event is important to the rehabilitation of patients.

RBP4 may be used as a predictive factor of [diabetic nephropathy](#) patients complicated with silent [cerebral infarction](#) (SCI). and is positively correlated with cognitive dysfunction. RBP4/Lp-PLA2/Netrin-1 pathway activation may be one of the occurrence mechanisms in diabetic nephropathy complicated with SCI ¹⁾.
