- [Surgical Management of Unstable Atlas Fractures: A Single Institutional Retrospective Review with Comparison of Occipitocervical and Atlantoaxial Fusion Outcomes](#)

The [Cervical spine sagittal balance parameters](#) are divided into 3 groups:

Occipitocervical parameters

[C0-2 Cobb angle](#)

Cervical sagittal shape and alignment

Measuring [C1-C2 sagittal Cobb angle](#) and [C2-C7 angle](#), and segmental angulation between surgically treated cervical segments with the [Cobb angle](#) method

Cervical sagittal balance parameters

[T1 slope](#) and [C2-C7 sagittal vertical axis](#). Those parameters, are the more consistent ones reported in the literature ¹⁾

Poblete et al. found a significant correlation between postoperative clinical status (cervical [Visual analog scale](#) score) and postoperative [C2-C7 sagittal vertical axis](#), suggesting that the cervical [angulation](#) and [alignment](#) are as important factors as the [cervical sagittal balance](#) in obtaining a satisfactory clinical outcome ²⁾.

Neck Tilt

[Neck Tilt](#)

Thoracic inlet angle

[Thoracic inlet angle.](#)

Lumbar spine angles

see [Lumbar spine angles](#)
