

They account for approximately 2% to 4% of **intracranial tumors** in **children** and

Choroid plexus tumors occur more frequently in children, comprising approximately 4% of all pediatric brain tumors. Up to 20% of these tumors occur during the first year of life.

They account for 0.5% of **intracranial tumors** in **adults**.

Choroid plexus tumors most commonly arise from the lateral ventricles (50%), followed by the fourth (40%) and the third ventricle (5%). Other locations are rare, including the cerebellopontine angle, supresellar region, brain parenchyma and the spine.
