

Chronic subdural hematoma of the posterior fossa

Chronic subdural hematoma (CSH) of the posterior fossa is extremely rare in adults, only a few case reports previously reported [1\)](#) [2\)](#) [3\)](#) [4\)](#) [5\)](#) [6\)](#) [7\)](#) [8\)](#) [9\)](#) [10\)](#).

Burr-hole evacuation and irrigation with or without closed-system drainage has been widely accepted as the optimum method to treat supratentorial CSH
