

Clinical case study

see [Case report](#).

see [Case series](#).

Clinical [case](#) studies present the details of real patient cases from medical or clinical practice. The cases presented are usually those that contribute significantly to the existing knowledge on the field. The study is expected to discuss the signs, symptoms, diagnosis, and treatment of a disease ¹⁾ ²⁾ These are considered as primary literature and usually have a word count similar to that of an original article. Clinical case studies require a lot of practical experience and may not be a suitable publication format for early career researchers. ³⁾
