

Coccyx

The coccyx (/ˈkɒksɪks/ kok-siks; plural: coccyges), commonly referred to as the tailbone, is the final segment of the vertebral column in humans and apes. Comprising three to five separate or fused coccygeal vertebrae below the [sacrum](#). It is attached to the sacrum by a fibrocartilaginous joint, the [sacrococcygeal symphysis](#), which permits limited movement between the sacrum and the coccyx.
