

# Coenzyme Q10

Co-enzyme Q10 (CoQ10) is a nutritional agent that might play a preventative role in [migraine](#).

A meta-analysis aimed to investigate the effects of CoQ10 as a supplemental agent in migraine.

[Web of Science](#), [PubMed](#) and [Cochrane Library](#) were searched for potential articles that assessed the effects of CoQ10 on migraine. Data were extracted by two independent reviewers and analyzed with Revman 5.2 software.

Zeng et al. included 5 studies with 346 patients (120 pediatric and 226 adult subjects) in the meta-analysis. CoQ10 was comparable with placebo with respect to migraine attacks/month ( $P = 0.08$ ) and migraine severity/day ( $P = 0.08$ ). However, CoQ10 was more effective than placebo in reducing migraine days/month ( $P < 0.00001$ ) and migraine duration ( $P = 0.009$ ).

This is the first study to demonstrate the effects of CoQ10 supplementation on migraine. The results support the use of CoQ10 as a potent therapeutic agent with respect to migraine duration and migraine days per month. Nonetheless, more studies are needed to support the conclusions <sup>1)</sup>.
