

□ Cognitively Flawed Neurosurgeons They don't choose to fail. But they never choose to think.

These neurosurgeons are not corrupt. They are drained, detached, or disconnected. Their failure is not in their hands — it's in their head.

They operate well. They may be respected. Some were even brilliant once. But they've stopped updating. Stopped questioning. Stopped caring about anything that doesn't fit their mental autopilot.

Their harm is quiet — not loud. They don't provoke conflict. They provoke stagnation.

□ Who are they? □ The Cynical Fossil - Lost faith in progress, now guards the past with bitterness.

□ The Hollow Technician - Executes perfectly, reflects never.

They're not dangerous because they break the rules. They're dangerous because they follow the same ones — forever.

□ What makes it cognitive failure? The erosion of curiosity

The repetition without reflection

The loss of adaptability

The mental fatigue mistaken for wisdom

They aren't dishonest out of malice. But by refusing to evolve, they betray the very essence of surgery: to learn, to adjust, to adapt — patient by patient, moment by moment.
