

Case reports

An unusual [case](#) of a patient who underwent [Colloid cyst resection](#) and then presented 6 weeks postoperatively with [obstructive hydrocephalus](#). There appear to be no prior reports of such a delayed complication after [colloid cyst resection](#).

A 50-year-old Caucasian woman underwent resection of a colloid cyst with an uncomplicated perioperative course. Postoperative imaging demonstrated complete resection of the cyst. She was discharged home on postoperative day 4 but presented 6 weeks later with symptoms of obstructive hydrocephalus resulting in poor neurologic outcome and ultimately death.

Patients presenting with symptoms of hydrocephalus after resection of a colloid cyst should be followed closely, and timely placement of an [external ventricular drainage](#) may be critical ¹⁾.
