

Engelbert Knosp

In 1993 Engelbert Knosp et al. offered the [Knosp grade](#) system for showing invasion of [cavernous sinus](#) by pituitary macroadenoma. Briefly, the much laterally adenoma grows and surrounds the [internal carotid artery](#) (ICA), the more grade level is. The grading defined by the relation of carotid lines with the limits of invasion. These lines passes through supra- and [intracavernous internal carotid artery](#) in [coronal view](#). There are medial, median and lateral carotid lines ¹⁾.
