

Lanterna Medical Technologies maintains its head office and operations in St. Gallen, Switzerland.

LANTERNA is focused on designing, manufacturing and marketing GENERIC implants for the surgical treatment of spinal disease.

The **FENIX**™ facet resurfacing technique might be considered in the future as surgical treatment of well selected patients suffering from chronic low back pain due to **lumbar facet joint degeneration**. A modification of the superior implant should provide an initial firm fixation preventing implant dislocation ¹⁾.
