- Design and radiological confirmation of three-column cortical bone trajectory in the lower thoracic vertebrae
- Assessing thermal changes in the equine thoracolumbar region following different capacitive-resistive electrical transfer protocols
- Effect of the sequence of intermediate instrumentation and distraction-reduction of the injured vertebra on the treatment of thoracolumbar burst fractures with high rate of spinal canal encroachment

First [thoracic vertebra](#) (**Th1**) The first thoracic vertebra has, on either side of the body, an entire articular facet for the head of the first rib, and a demi-facet for the upper half of the head of the second rib. The body is like that of a [cervical vertebra](#), being broad, concave, and lipped on either side.
