

Genesys Spine

Founded in December of 2009, Genesys Spine's mission was to bring a suite of medical implants and instruments with novel characteristics into a mature spinal fusion market. Since that time, Genesys has released eight new FDA-cleared product lines with several other products in various stages of the design and development cycle. Genesys has also developed several proprietary instruments to aid in the use of its products. All of Genesys' inaugural products and proprietary features, including system-specific instruments, have garnered very positive feedback from the marketplace and remain within existing parameters for today's current reimbursement codes.
