

Horse brain

In a study, the morphology of the [horse brain](#) (*Equus caballus*) is described in detail using [High Field Magnetic Resonance Imaging](#). The study includes [sagittal](#), dorsal, and transverse [T2](#)-weighted images at 0.25 mm resolution at 3 [Tesla](#) and [3D](#) models of the brain presenting the external morphology of the brain. Representative [galloxyanin stained](#) histological slides of the same brain are presented. The images represent a useful tool for MR image interpretation in horses and may serve as a starting point for further research aiming at *in vivo* analysis in this species ¹⁾.
