Respect for diversity and inclusion: Hospitals should strive to create a welcoming and inclusive environment for all patients and staff, regardless of race, gender, sexual orientation, religion, or socioeconomic status.

Fairness and equity: Hospitals should strive to provide equal access to care and treatment for all patients, regardless of their ability to pay. They should also ensure that their policies and practices do not discriminate against any particular group.

Social responsibility: Hospitals have a responsibility to contribute to the overall health and well-being of their communities. This includes supporting public health initiatives, providing charity care for those in need, and promoting healthy lifestyles and behaviors.

By adhering to these principles, hospital administrators can create a culture of ethical behavior and decision-making that ultimately benefits both patients and staff.
