

Hypercalcemia

Hypercalcemia is a condition in which the calcium level in your blood is above normal. Too much calcium in your blood can weaken your bones, create kidney stones, and interfere with how your heart and brain work. Hypercalcemia is usually a result of overactive parathyroid glands.

Hypercalcemia: may produce a dramatic [encephalopathy](#) with [confusion](#), [delirium](#), or [coma](#). Neurologic symptoms of hypercalcemia associated with [Multiple myeloma](#) are more common than in hypercalcemia of other etiologies
