

Inflammatory pseudotumor of the choroid plexus

A case of [inflammatory pseudotumor](#) is described, in which CT revealed a hyperdense [intraventricular lesion](#) with a trapped [temporal horn](#), and MR imaging showed decreased [T1](#) and markedly [hypointense T2](#) signal with homogeneously intense enhancement. Radiologically and grossly the tumor resembled a [meningioma](#); however, histologically it was composed purely of inflammatory, nonneoplastic components. The lesion was resected with no [evidence](#) of [recurrence](#) at 5-month follow-up ¹⁾.
