

# Interforniceal approach

The surgical procedure use a [transcallosal approach](#) is direct and provides good surgical field exposure and fewer post operational complications. This approach should be considered as the method of choice for surgical removal of the [third ventricle tumors](#)<sup>1)</sup>.

Tumor resection combined with third ventriculostomy has significant advantages in this approach<sup>2)</sup>.

It appears to be a safe route for [pineal region tumors](#) in children, and complete resection can be achieved in the majority of patients<sup>3)</sup>.
