

Intracranial Hypertension Etiology

Hydrocephalus

[Hydrocephalus](#)

Traumatic Intracranial Hypertension

see [Traumatic Intracranial Hypertension](#).

Idiopathic intracranial hypertension

Cerebral [venous sinus stenosis](#) has been reported in up to 90% of patients with IIH.

Repeat studies after normalization of the [intracranial pressure](#) demonstrated normalization of this finding.

The cerebral sinus narrowing might be a consequence of the increased [intracranial pressure](#). However, venous sinus narrowing/thrombosis could cause increased intracranial pressure as well. This situation could represent the chicken or egg debate as to which occurs first ¹⁾.

see [Idiopathic intracranial hypertension](#).

Intracranial Hypertension in Children

see [Intracranial Hypertension in Children](#).

Intracranial hypertension after aneurysmal subarachnoid hemorrhage

[Intracranial hypertension after aneurysmal subarachnoid hemorrhage](#)
