

Kaufman's point

Although there are various other ventriculostomy entry points for EVD or shunt, compared to Kaufman's, Paine's, and [Menovsky's points](#), the modified [Kocher's point](#) has several advantages. For example, Kaufman's point is located 5 cm superior to the nasion and 3 cm lateral to the midline. Still, currently, it is rarely used due to its poor cosmetic results and lower success rates ¹⁾
