

# Larotrectinib

Larotrectinib, a selective inhibitor of tropomyosin receptor kinase, has been effective in pediatric tumors with **Neurotrophic Tyrosine Receptor Kinase** (NTRK) fusion mutations in children as young as 1-month-old.

Offenbacher et al. shared the case of a 9-month-old boy who presented with a 4-month history of regression of his milestones and severe **constipation** who was found to have a large **spinal pilocytic astrocytoma** with multiple intracranial periventricular lesions <sup>1)</sup>
