

On 15th October 1744, the French surgeon Claude-Nicolas [Le Cat](#) (1700-1768) introduced a specially invented [canula](#) into the [lateral ventricle](#) of a newborn boy with [hydrocephalus](#). The canula was used as a tap and was left in place for 5 days, until the death of the child. This procedure should be seen as the first documented description of a device for repeated ventricular taps in the treatment of hydrocephalus ¹⁾.

¹⁾

Kompanje EJ, Delwel EJ. The first description of a device for repeated external ventricular drainage in the treatment of congenital hydrocephalus, invented in 1744 by Claude-Nicolas Le Cat. *Pediatr Neurosurg*. 2003 Jul;39(1):10-3. PubMed PMID: 12784070.
