

LEAT

Low-grade epilepsy associated tumor.

Long-term epilepsy associated tumor.

Patients with LEATs in the [temporal lobe](#) frequently show cognitive impairments. Predictors for pre- and postoperative cognition mostly correspond to what is known for [temporal lobe epilepsy](#) and [resections](#) in general. However, different tumor types appear to be associated with different cognitive and seizure outcomes with [astrocytoma](#) as the least benefitted group ¹⁾.
