

Madjid Samii Articles

Only those who were dedicated and [competent](#) in all aspects related to the patient's [management](#) went on to great [careers](#), starting with a thorough [history](#) taking and a complete [examination](#) and analytical [evaluation](#) of neurologic, neurophysiologic, neuroradiologic, and laboratory findings.

[Manual skills](#) reflect the [intellectual ability](#) for [analysis](#) of different situations during [surgery](#). I don't believe that a very skillful artist who is able to perform a very complicated piece repeatedly would necessarily become a skilled [neurosurgeon](#) ¹⁾.
