

Medical report

A **medical report** is an official **document** that provides detailed information about a patient's **health status**, **medical history**, **diagnosis**, **treatment**, and **prognosis**. It is typically written by a healthcare **professional**, such as a doctor or specialist, and serves various purposes, including:

1. **Clinical Documentation** – Recording patient progress, diagnoses, and treatments.
2. **Legal Evidence** – Serving as a **legal** record in cases of medical disputes or insurance claims.
3. **Communication** – Facilitating information exchange among healthcare providers for coordinated care.
4. **Research & Education** – Contributing to medical studies and training.

A medical report may include: - Patient's details (name, age, gender, etc.) - **Medical history** (previous conditions, allergies, medications) - **Examination** findings (physical, neurological, or laboratory results) - **Diagnosis** (including differential diagnoses) - **Treatment** plan (medications, surgery, therapy) - Follow-up recommendations
