

Mesial temporal sclerosis

Mesial temporal sclerosis (MTS) is a term used to describe scarring in the deep part of the temporal lobe.

Mesial temporal sclerosis (MTS) is the most common cause of intractable temporal lobe epilepsy.

Etiology

see [Mesial Temporal Sclerosis Etiology](#).

Pathology

The hippocampal formation is not uniformly affected, with the dentate gyrus, and the CA1, CA4 and to a lesser degree CA3 sections of the hippocampus being primarily involved. Histologically there is neuronal cell loss, gliosis and sclerosis.
