

The border between [errors](#) due to [methodological ignorance](#), embellishment of [reality](#) and [fraud](#) is sometimes difficult to determine. It is the intentional nature and the repetition of these “arrangements” that are the real switch to deliberate fraud. The emergence of regulatory procedures, such as clinical trial registries, “reporting guidelines”, improvement of “peer review” and data sharing, are some of the measures used to fight against and improve transparency of clinical research.
