

# Muenke syndrome

Muenke [syndrome](#) is a condition characterized by the premature closure of the [coronal suture](#) of the skull ([coronal synostosis](#) ) during development. This affects the shape of the head and face. Other variable features include abnormalities of the hands or feet, hearing loss and developmental delay .

Other variable features include abnormalities of the hands or feet, hearing loss and developmental delay. Muenke syndrome is caused by mutations in the [Fibroblast growth factor receptor 3](#) gene. It is inherited in an autosomal dominant pattern.
