

Myalgia

Pain in a muscle or group of muscles.

May be a side effect of “statins” (drugs used to lower serum concentration of LDL cholesterol) with or without elevation of serum creatinine phosphokinase, sometimes with accompanying weakness and rarely with severe [rhabdomyolysis](#) and myoglobinuria leading to renal failure (risk may be increased with renal or hepatic dysfunction, advanced age, hypothyroidism, or serious infection) ¹⁾.

¹⁾

Choice of lipid-regulating drugs. Med Letter. 2001; 43:43-48
