

Neurosurgery Journals

The first [journal](#) dedicated to the field of [neurosurgery](#) can be debated. The first recurrent publication whose major focus was in the field of neurosurgery was Travaux de Neurologie Chirurgicale, initially published by Chipault in [1896](#)

Classification of Neurosurgical Journals

Tier 1: High-Impact, Global Influence

These journals shape clinical practice and research worldwide.

Journal	Impact Factor (approx.)	Publisher	Notes
Journal of Neurosurgery (JNS)	~4.1	AANS	Flagship journal; includes Spine and Pediatrics editions.
Neurosurgery	~4.5	CNS / Oxford UP	High impact; includes *Operative Neurosurgery*.
Brain	~13	Oxford UP	Broad neuroscience focus, includes neurosurgical research.
Acta Neuropathologica	~17	Springer	Key for neuro-oncology and tumor pathology.

Journal	Impact Factor (approx.)	Publisher	Notes
Lancet Neurology	~59	Elsevier	Publishes major neurosurgical trials and reviews.

□ **Tier 2: Specialty or Regionally Prestigious**

Well-regarded journals in subspecialties or specific geographic regions.

Journal	Impact Factor	Focus
Acta Neurochirurgica	~3.0	General clinical neurosurgery; official EANS journal.
World Neurosurgery	~2.1	Global outlook; supports case reports and LMICs.
Operative Neurosurgery	~2.0	Surgical techniques and intraoperative innovation.
Journal of Clinical Neuroscience	~2.0	Broad clinical scope including neurosurgery.
JNS: Spine / Pediatrics	~2.5	Subspecialty editions of JNS.
Journal of Neurological Surgery Part A & B	~1.5	Skull base and spine focus.
Neurosurgical Review	~2.8	Review articles and original studies (Europe-centered).

□ **Tier 3: Niche, Emerging, or Open Access**

Useful for case reports, fast-track publication, or regional content.

Journal	Model	Focus
Frontiers in Surgery - Neurosurgery	Open Access	Accepts diverse neurosurgical content; thematic series.
Cureus	Open Access	Fast publishing; case reports; variable quality.
Asian Journal of Neurosurgery	Open Access	Regional case series; growing visibility.
Neurosurgical Focus	Thematic	Monthly focused topics; part of JNS family.
Journal of Neuro-Oncology	~3.5	Interdisciplinary CNS tumor research.
Journal of Stroke & Cerebrovascular Diseases	~2.2	Stroke and vascular neurosurgery.

□ **Practical Recommendations**

Purpose	Recommended Journals
Early-career publications	World Neurosurgery, Acta Neurochirurgica, Cureus
Technical innovation	Operative Neurosurgery, Neurosurgical Focus
High visibility research	JNS, Neurosurgery, Brain, Lancet Neurology
Neuro-oncology focus	Journal of Neuro-Oncology, Acta Neuropathologica

Predatory Journals

[Predatory Journals](#)

With the rapid proliferation of [artificial intelligence tools](#), important questions about their [applicability to manuscript preparation](#) have been raised.

Schneider et al. explore the methodological challenges of detecting AI-generated content in neurosurgical [publications](#), using existing detection tools to highlight both the presence of AI content and the fundamental limitations of current detection approaches.

They analyzed 100 randomly selected manuscripts published between 2023 and 2024 in high-impact [neurosurgery journals](#) using a two-tiered approach to identify potential AI-generated text. The text was classified as AI-generated if both robustly optimized bidirectional encoder representations from transformers pretraining approach (RoBERTa)-based AI classification tool yielded a positive classification and the text's perplexity score was less than 100. Chi-square tests were conducted to assess differences in the prevalence of AI-generated text across various manuscript sections, topics, and types. To eliminate bias introduced by the more structured nature of abstracts, a subgroup analysis was conducted that excluded abstracts as well.

Approximately one in five (20%) manuscripts contained sections flagged as AI-generated. [Abstracts](#) and [methods](#) sections were disproportionately identified. After excluding abstracts, the association between section type and AI-generated content was no longer statistically significant.

The findings highlight both the increasing integration of AI in manuscript preparation and a critical challenge in academic publishing as AI language models become increasingly sophisticated and traditional detection methods become less reliable. This suggests the need to shift focus from detection to [transparency](#), emphasizing the [development](#) of clear [disclosure](#) policies and [ethical guidelines](#) for AI use in academic writing ¹⁾.
