

Peripheral neuropathy etiology

[Diabetic neuropathy](#)

[Entrapment neuropathy](#).

Common causes include systemic diseases (such as [diabetes](#) or leprosy), vitamin deficiency, [medication](#) (e.g., chemotherapy), traumatic injury, [radiation therapy](#), excessive alcohol consumption, immune system disease, Coeliac disease, or viral infection. It can also be genetic (present from birth) or idiopathic (no known cause).

[Dyslipidemia](#) is an independent risk factor for the development of neuropathy. In addition, [oxidative stress](#) and inflammatory response may play an important role in the [pathogenesis](#) of high-fat diet-induced neuropathy ¹⁾.

[Drugs used for Acquired immunodeficiency syndrome treatment](#)
