

# Practice-informing

**Practice-informing** refers to the process or quality of contributing to or shaping real-world practice — such as [clinical decision-making](#), [educational strategies](#), [policy development](#), or [technical procedures](#) — based on research, evidence, or reflective experience.

It emphasizes the **translation of knowledge into action**, making theoretical insights or empirical findings directly applicable in professional settings.

## Examples

- This study provides 'practice-informing' evidence for managing pediatric traumatic brain injury.
- Patient-reported outcomes are often highly 'practice-informing' for care design.
- Ethnographic research can be deeply 'practice-informing' in public health planning.

## Related Terms

- [evidence-based practice](#)
- [translational research](#)
- [applied knowledge](#)
- [real-world implementation](#)
