

# Pulmonary hypertension

Pulmonary [hypertension](#) happens when the pressure in the blood vessels leading from the heart to the lungs is too high. With pulmonary hypertension, the blood vessels in the lungs develop an increased amount of muscle in the wall of the blood vessels.

---

A platelet [RNA sequencing](#)-panel may accurately discriminate patients with pulmonary hypertension from asymptomatic controls. In the light of current diagnostic delays, this study is the starting point for further development and evaluation of a platelet RNA-based blood test, to ultimately improve early diagnosis and clinical outcomes in patients with pulmonary hypertension <sup>1)</sup>.
