

Repository

A **repository** is a storage location for code, files, or [data](#)

Types of Repositories: 1. **Local Repository** – Stored on your local machine. 2. **Remote Repository** – Hosted on a server, often for collaboration. 3. **Bare Repository** – A repository without a working directory, used for sharing and syncing changes.

Common Features: - **Version Control** (Git, Mercurial, SVN) - **Branching & Merging** (Git branches for parallel development) - **Commit History** (Tracking changes over time) - **Collaboration Tools** (Pull requests, issue tracking)
