

S2 alar-iliac screw

The S2 alar-iliac (S2AI) [screw](#) is a modification of the traditional iliac fixation technique using the space between the neural foramina of S1 and S2 as an insertion point to fix the [sacrum](#) to the [ilium](#).

Traumatic [sacral spondyloptosis](#) adds a degree of difficulty to reduction, fixation, and fusion. The technique presented herein achieved sagittal realignment via a distraction maneuver of S1-2 in which rods were attached to bilateral dual [S2 alar-iliac screws](#) with reduction screws placed at S1, ultimately pulling L5 and S1 up to the rod for fixation ¹⁾.
