

Screening

A strategy used in a [population](#) to identify an unrecognised [disease](#) in individuals without [signs](#) or [symptoms](#).

Screening, in medicine, is a strategy used to look for as-yet-unrecognised conditions or risk markers.[

This testing can be applied to individuals or to a whole population. The people tested may not exhibit any signs or symptoms of a disease, or they might exhibit only one or two [symptoms](#), which by themselves do not indicate a definitive diagnosis.

Examples

[Bedside dysphagia screen.](#)

[Screening for glioma.](#)

[Unruptured intracranial aneurysm screening.](#)
