

Sensor

A sensor is a [device](#), module, or subsystem whose purpose is to detect events or changes in its [environment](#) and send the information to other electronics, frequently a computer processor. A sensor is always used with other electronics, whether as simple as a light or as complex as a computer.

see [Tactile sensor](#).

Sensor Technology Embedded in [Stents](#): A Potential New Approach to Continuous Monitoring for [in Stent Stenosis](#), [Thrombosis](#), and Beyond ¹⁾.
