

Sonobiopsy

Sonobiopsy is a [medical procedure](#) that combines [ultrasound imaging](#) with a [biopsy](#) to obtain a tissue sample from a specific location within the body. It involves using an ultrasound probe to guide a biopsy needle to the target area and take a small tissue sample for examination. Sonobiopsy is commonly used to diagnose and evaluate various conditions, including cancer, and can be less invasive and have a lower risk of complications compared to traditional biopsy procedures.
