

Tela chorioidea of the fourth ventricle

Fm: **Foramen of Magendie**; imv: **inferior medullary velum**; icp: **inferior cerebellar peduncle**; pica: **posterior inferior cerebellar artery** (third and fourth segments) tc: **tela chorioidea**; tvj: **telovelar junction** (yellow discontinuous line).

In the **telovelar approach**, the **cerebellomedullary fissure** (CMF) is exposed and access to the ventricle is obtained by incising the **tela chorioidea** and **inferior medullary velum**. This approach enables the exploration of the entire ventricle cavity from the **obex** to the **aqueduct**.
